

Sectra RIS

Optimized workflow and Single Desktop™ integration provide the highest performance work environment for your radiologists.

The industry's best user interface and intuitive workflow reduce long term training time and cost, and increase adoption and use.

Paperless workflow reduces costs, improves patient safety, and allows radiologists and other staff to work from any location at any time.

Sectra RIS is an Enterprise-Class web-based radiology information system flexible enough to be used by imaging centers and hospitals of all sizes, as well as large and growing multi-site organizations.

An integrated solution

With more than 20 years of experience in radiology IT, and more than 1,000 customers worldwide, Sectra is a trusted name in radiology, with deep integration and intraoperability experience.

Sectra RIS integrates with other systems throughout the enterprise, including ADT, Order-entry, Scheduling, Billing and Reporting systems, providing flexible workflow solutions to meet the varying and changing needs of today's healthcare organizations.

Sectra's integrated RIS/PACS supports both RIS-driven and PACS-driven workflow, and provides a completely web-based solution that allows radiologists to work wherever they want, whenever they want.

True paperless environment

A paperless workflow combined with web-based access reduces costs, improves patient safety, and allows radiologists, transcriptionists and other users to work from any location at any time.

Leading edge design

The Industry's best user interface and intuitive workflow reduce long term training time and cost, and increase adoption and use. Most staff can work from a single screen, and all components are web-based, simplifying deployment, and providing radiology staff the flexibility to work from any location.

SECTRA

Sectra RIS features and benefits

True paperless workflow

- Document generation and management, with scanner support and patient signature capture.
- Documents and electronic Post-It notes can be set to automatically pop-up at certain points during the workflow.
- Users can securely email a single user or a group of users, or drop an examination into someone's Inbox.
- Technologist worksheets, including structured notes, measurements and annotated graphics can be inserted by radiologists directly into the diagnostic report.

Single Desktop™ reporting environment

- Customizable view of all relevant clinical information.
- Automatic launching of DICOM Viewers.
- Embedded digital dictation and speech recognition.
- Native mammography reporting and tracking.
- Critical results management.
- Key Image capture and annotation.
- Single-click key image capture.

Proactive management

- Reduce errors and improve revenue capture by defining which fields are required at various points during the workflow, and what information is required in order for billing information to be accepted.
- Use the Real-time monitor to continuously monitor various tasks or events within Sectra RIS, so that you know about problems before they impact your business.
- Have Snapshots automatically alert you by email when certain KPIs are at risk or exams remain in a particular status for too long.

Leading edge design

- The Scheduling Wizard, a powerful multi-modality/multi-exam/multi-site patient scheduling engine that immediately offers four sets of coordinated time-slots, based on the rules that you have defined.
- The technologist worklist, which includes a suite of easy-to-use tools to help technologists manage their day-to-day activities, including the ability to begin and end exams with a single click.
- Embedded mammography reporting and tracking that provides the administrative support necessary to ensure compliance with the Mammography Quality Standards Act (MQSA).
- Fully-embedded speech recognition built using Nuance's PowerScribe Software Developer's Kit, which improves throughput, reduces transcription costs, and provides the fastest possible report turnaround.
- Report Fetcher, which automatically and securely transmits finalized diagnostic reports over the Internet, allowing physicians to manually or automatically import reports into their own Electronic Medical Record system without the complexity of a TCPIP-based HL7 interface.
- Provide referring physicians with web-based access to your RIS, offering as little or as much functionality as they require, including on-line ordering, rules-based scheduling and access to real-time exam status updates, reports & images.
